Foreword

It is that time of the year again!

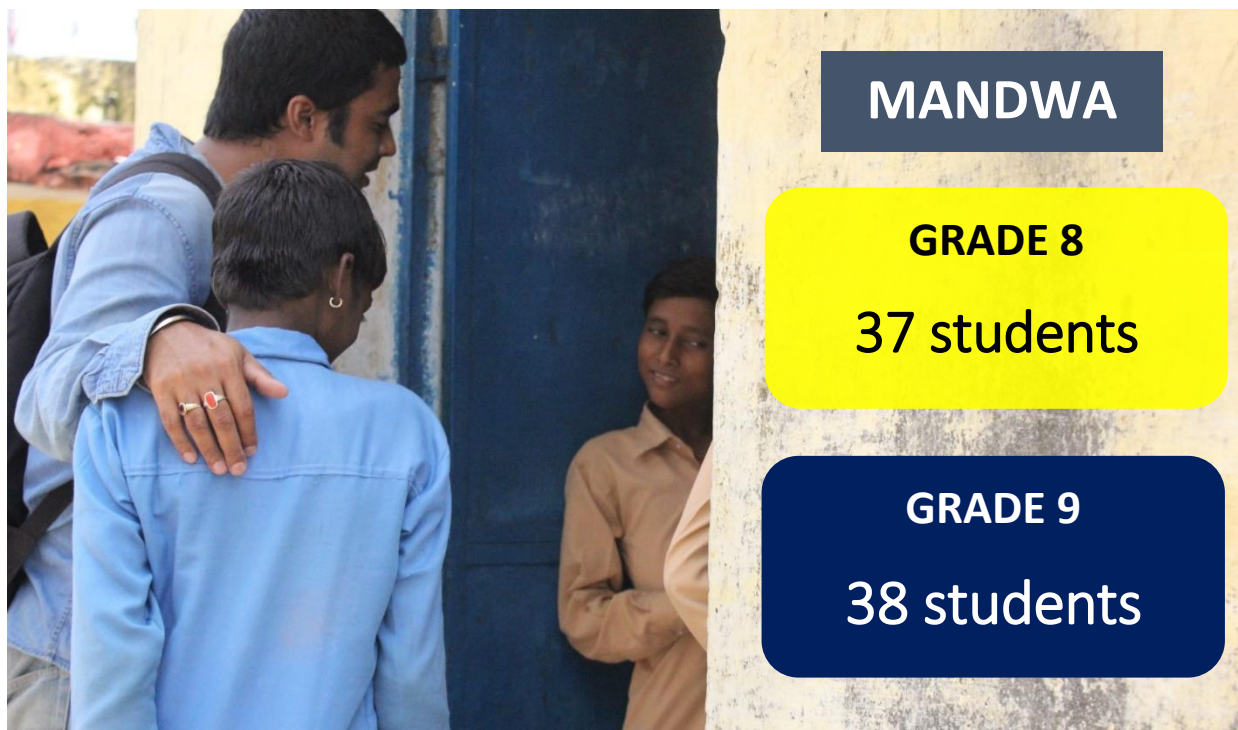

New faces, nostalgic moments, looking back at how time flew so quickly and preparing for the way forward.

In a nutshell, this year at EFL-Jatan-Kshamtalaya we saw great beginnings as two new people Stephen Charles and Deepshikha Chhetri joined us through the India Fellow Program and committed themselves to working with high school students in Jhed and Bhoola respectively and Alokesh completed two full years with his intervention in the Mandwa school.

Their work has been able to give the children exposure to sports, health and the arts field. Deepshikha and Stephen's growth has been very enriching to follow.

This annual report takes us through their journey from classrooms to their projects and the impact that it has created in the school, their teachers and the community that the school is from.

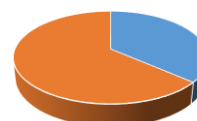

CLASSROOM INTERVENTION

The students of grade 8 and 9 lacked the basic understanding of English in particular and other subjects in general. They mostly resorted to rote learning and the critical thinking, understanding and questioning was absent in the class. They lacked the space to express freely and nodded to whatever the teacher narrated or said irrespective of whether they understood or not. The students were scared of asking questions.

The teachers were and are still concerned about being answerable to administrative bodies and are apprehensive of whether any intervention would leak out the actual scenario in the school. Especially after the Principal came in the need to be proper and administratively correct on paper increased.

Gender Ratio (Class 8 and 9 combined)

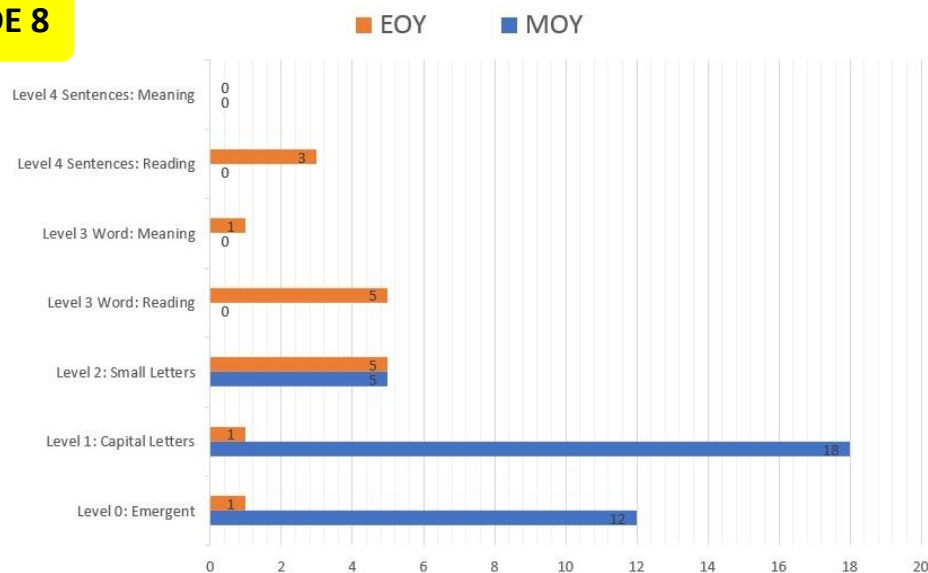

■ Females ■ Males

Combining students from both Class 8 and 9, which is 75 there 49 males and 28 females

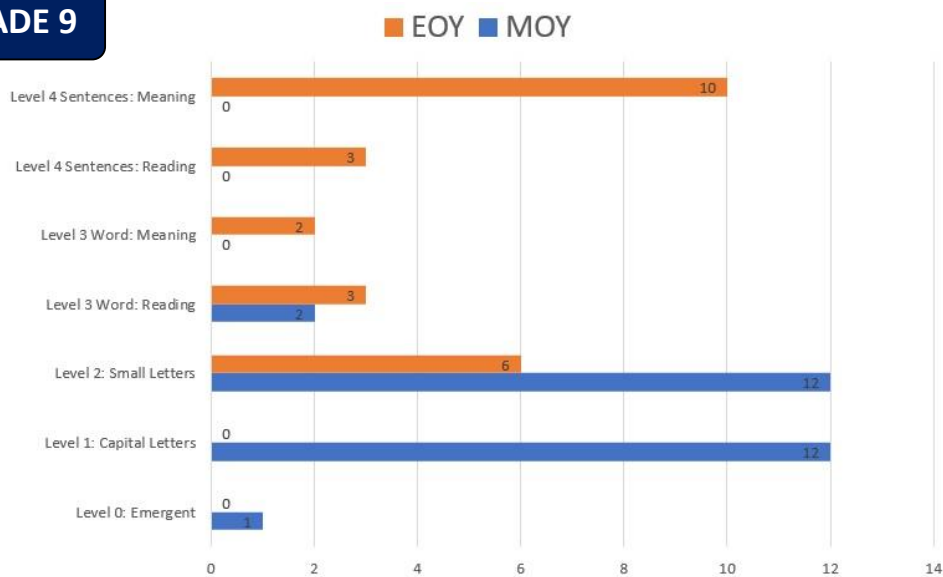

"I would love to see students as independent and curious thinkers ready to explore the possibilities before coming to a conclusion. I want them to express their thoughts and be able to have the zeal to achieve what they have expressed." – Alokesh, fellow in Mandwa

THE IMPACT: ASER COMPARITIVE ANALYSIS in MANDWA (Baseline v/s Endline for English)

GRADE 8

GRADE 9

After 2 years of intervention in grade 9 all students on an average have achieved **2 grade levels of learning outcome (in English)**

The intervention has led to the students being relatively more confident and responsive in class. The degree of participation has increased. The intervention has also contributed to the increase in the attendance of the students. In the month of July during the monsoon session students

“I have realised that one such person is needed to stay in the school who can continuously talk to the school administration about such things so that a reinforcement takes place for the principal.”

- Alokesh, fellow in Mandwa

would turn up less for class. With time the number increased and approximately 80 to 90 percentage of students turn up every day. However, the data would be different in the school attendance register as the teachers

need to show close to 100 percent attendance to adhere to different administrative needs and purposes, such as disbursement of scholarships, enrolment data, examination, government accountability, etc. The teachers have requested to not put any of our attendance data out in the public as they might face problem due to this and I would like to keep it that way.

The continuous interaction with the principal has also led to the principal investing in the infrastructure of the school, like mending the bathroom doors and painting of the school building. Though one cannot say that such things happened because of one reason or the other.

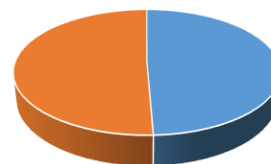

CHALLENGES I FACED...

As compared to 2016-2017, where the number of teachers in the school was 3, in the year 2017-2018, the total number of teachers became 6. This led to a decrease in teaching hours per day as the teachers also needed to take their class time. As a result I got only 1 class with grade 8 and 9. Post which I would teach grade 10 to prepare them for their board exams

“The School (Rajkiya Madhyamik Vidyalya, Akha Ji Ka Tiba) provides education to children from Class 1st to 10th standard. Due to lack of infrastructure, children are made to sit together in a class and arrangements have also been made in the corridor. During rains, there is a lot of water leakage from the roof, which results in children attending classes in the corridors. Students sit on the floor to attend classes, as there are no table and chairs in the school.”

Gender Ratio of children
(Both direct and indirect
intervention)

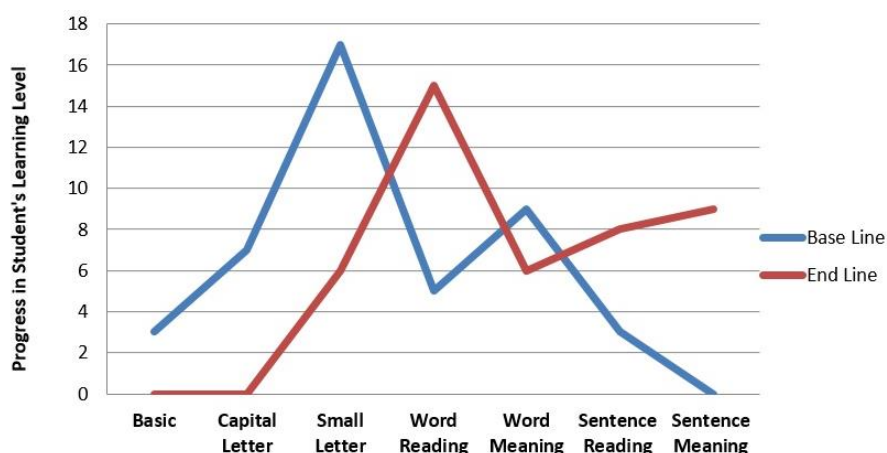

With a total strength of 310 students the
gender ratio is fairly balanced with 153
females and 157 males

“I want to foster healthy development and well-being of children in the school and the community so that they attend school regularly”

Deepshikha, fellow in Bhoola

THE IMPACT: ASER COMPARITIVE ANALYSIS BHOOLA (Baseline v/s Endline for English & Math)

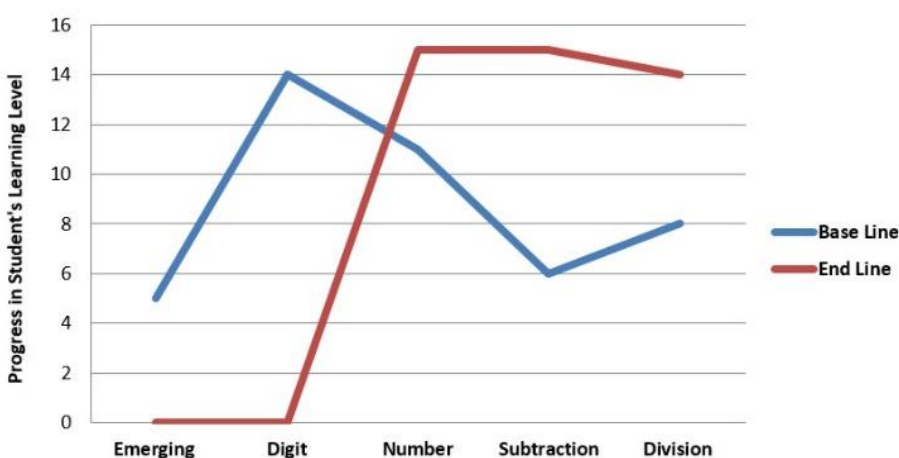

GRADE 8 - ENGLISH

At the time of the base line assessment, out of 44, 3 children were at the basic level and 7 children could only identify capital letters. Now, they have progressed and are able to read 3 letter

words. There are few children in the class who have progressed till reading a sentence and understanding its meaning.

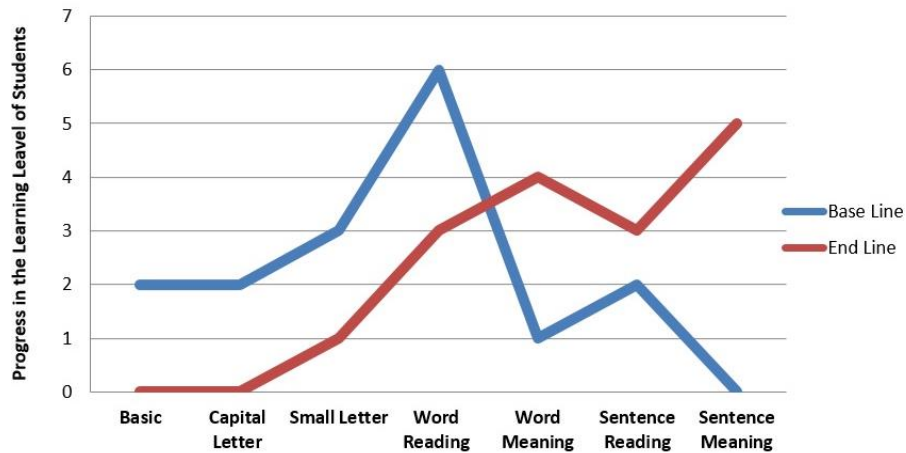

GRADE 8 - MATH

At the time of the base line assessment, most of the children were only able to identify digits and number. Now most of the children are able to solve subtraction and division problems.

“Earlier I never used to open our English textbook after school, as I was not able to make any sense out of the text written in the book. Now as I have learnt new words, I try to understand by picking up words and what it means.” – Deepshikha’s student from grade 9

GRADE 9 - ENGLISH

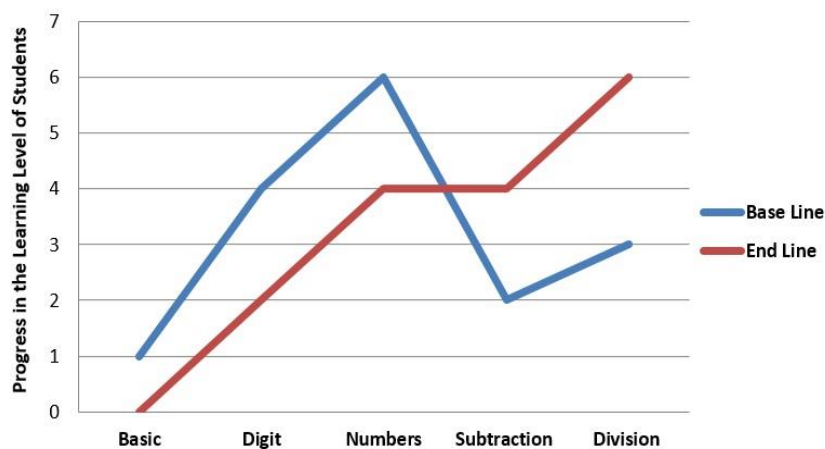

As per the ASER Base Line assessment, only 2 children were at the basic level. Most of the children (6) knew how to read three letter words but didn't know its

meaning and only 2 children knew how to read a sentence but didn't know its meaning. Now these children have moved to the next level of understanding meaning of words and reading a sentence. 5 children in the class have progressed to understand the meaning of simple sentences. Those who were at the basic level, are now able to identify capital and small letters as well as are able to read three letter words.

GRADE 9 - MATH

Base Line Vs End Line

At the time of the base line only 1 child was at the Basic level and only 3 children knew how to do division. Now, most of the children are able to identify digits, numbers and out of 16, total number of 6 children has learnt how to do division.

The journey has been full of opportunities and learning. There have been ups and downs in the journey of fellowship. I do not say I can bring a complete solution to a problem, but with a belief of doing for as many and as long as I can, I am grateful to

"We want to learn English. Earlier our Sir used to come read a story from the textbook and write some words and their meaning on the board in English. For a while we used to remember the pronunciation of the words but as the class used to get over, we were not able to memorize it. But now, seeing the way ma'am teaches us our sir has changed some of his methods, like he writes the pronunciation of difficult words in Hindi so that we remember how to pronounce it and helps us in understanding it's by meaning by using that word in simple sentences." – **Student from Grade 9**

receive such an overwhelming support and love from various people, which made me believe in myself and initiate things without the fear of not getting any results. I have seen a lot of growth in myself in terms of confidence, better articulation and expression of thoughts and feelings, curiosity and eagerness to learn, self- reflection and rigor in doing things.

In the community, I have visited regularly with families along with the school children to know about them at a deeper level using some aspect of PRA tools. Also, visited families of those children who do not attend school regularly.

CHALLENGES I FACED...

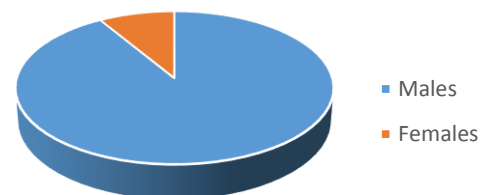

Initially language barrier as children used to respond only in the local language

Time-management: In terms of getting the time slots from teachers due to a predesigned timetable.

“When I first entered the school in the month of august, I was excited with the task on hand but at the same time was nervous about whether I would be able to settle in also would I be able to contribute to the development of the school in any way, the initial stereotype of a well-structured school in terms of infrastructure was broken as soon as I entered the gates of the school, all the rooms were leaking and there was algae on the outer walls of the school, there was only couple of rooms that were operational , all the children used to sit either in the porch or in the rooms that were leaking a little less. The field was covered by thorn bushes and it was not in a condition to play. Majority of the kids had not played or seen a football and Ultimate Frisbee before I intervened in the school. Seeing a Laptop was also for the first time.”

Gender Ratio of Students

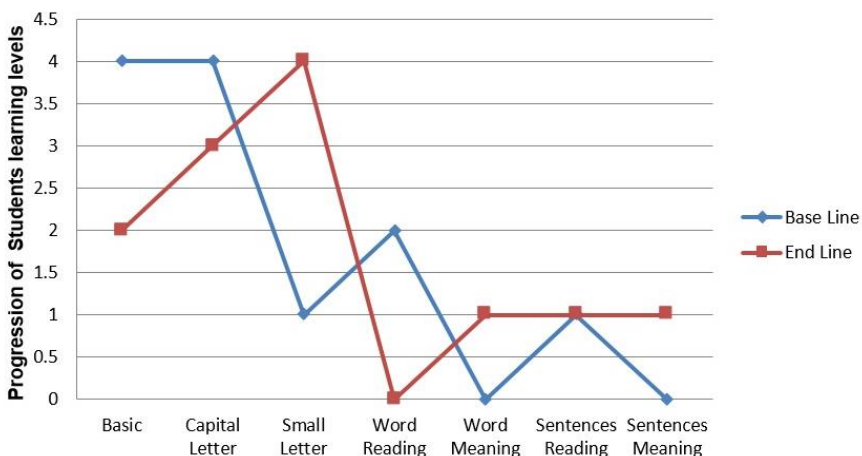

With a total class strength of 46 students, the number of girls are just 4 and the strength of boys in the classroom is 42.

I want to bring the best out of every child through arts & sports and create a cadre of local young leaders who can take this initiative forward” - Stephen, fellow in JHED

THE IMPACT: ASER COMPARITIVE ANALYSIS (Baseline v/s Endline for English & Math)

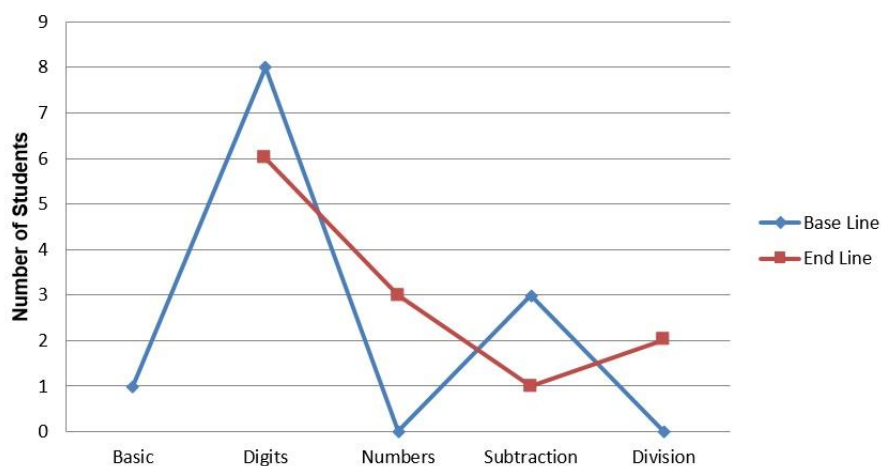

GRADE 7 - ENGLISH

At the time of base line assessment out of 12 kids in 7th Grade 4 kids were at Basic according to ASER, from which 2 kids have now moved up, 4 kids were only able to recognize Capital letter, out of that 1 kids have now moved onto small letter. There was 1 kid

who was only able to recognize small letter but now 4 kids can identify small letter, 2 kids were able to read words and 1 was able to read sentence as well but now out of those 3 kids 1 knows the meaning of word and 2 kids can read sentences out of which 1 can also comprehend.

GRADE 7 - MATH

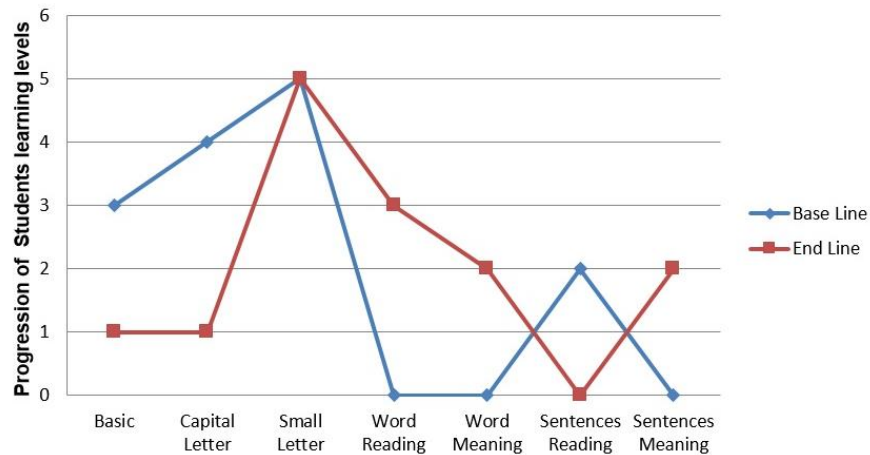

At the time of Base Line out of 12 kids, 1 kid was unaware about digits but now he knows about digit and slowly he would pick it up, other than that 8 kids knew about digits, 3 kids knew Numbers but didn't know how to subtract, and 3 kids knew how to subtract but not divide and now after the end line 6 kids are at

digit level, 3 are at numbers level, 1 is at subtraction level and 2 know how to divide.

We started learning English and even the other teachers started learning English from bhaiya, he never says no for a doubt or question, everyone feels comfortable being around him, he is like a friend to us, he comes to our home to eat food, sometimes he stays overnight as well and our parents also likes him as he tells us new information about new things, he also helps in house chores when he stays. – A student of Grade 8

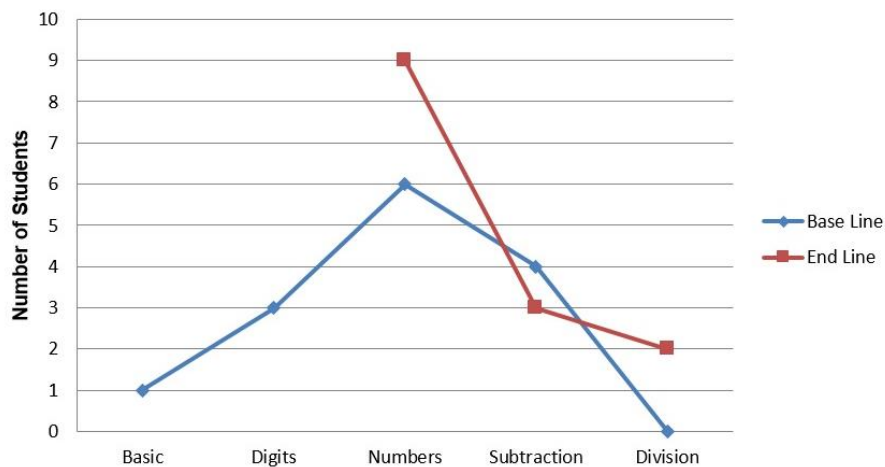

GRADE 7 - ENGLISH

At the time of base line assessment out of 14 kids in 8th Grade, 3 kids were at Basic according to ASER, from which 2 kids have now moved up, 4 kids were only able to recognize Capital letter, out of that 3 kids have

now moved onto small letter. The kids who moved from basic and capital are now able to recognize small letters, 3 kids are now able to read words and 2 kids also know the meaning of those words, previously 2 kids were able to read sentences but now both of them can read sentences and can comprehend as well.

GRADE 7 - MATH

At the time of Base Line out of 14 kids, 1 kid was unaware about digits but now he has developed number sense along with 8 more kids, 3 kids now know how to subtract and 2 kids know how to divide compared to the previous 0.

I read in the class, I have fun while learning English. I like to make fun while talking in English. I like to talk to my friends.

- A student of Grade 7

“Now they don’t hesitate to ask anything or try something new but still there is a fear of being wrong, the classroom attendance has increased because they want to learn new things, have fun, play games and I have provided them with that environment.

The class is growing day by day; most of the kids have started to identify English letters now where as there are 6 kids who are still struggling with that, I am taking remedial classes for them but due to too many holidays and examinations in the past, I have not been able to give them much of my attention, aim at the end of this season is to make them start reading and speaking small words and sentences. Post school time, Students come to my home and are eager to learn. I am teaching them how to use a computer/laptop along with English and Math after school or in the evening.”

Challenges I faced...

Language has been the biggest hindrance in terms of lesson impartation; mostly kids don’t even know Hindi so I have to arrange a translator from the class.

Second barrier is the irregularity of the kids, due to work at home some of them don’t attend classes regularly and because of that they are unable to move along with the class.

Third Barrier has been festivals and holidays, because of too many intervals the culture of learning has not been set up as I wanted it to.

When it comes to football, we have logistical challenge such as the sports field. We keep on removing thorn plants because it punctures the football, already 10 footballs have been punctured and some kids have got injured as well because of uneven surface; the aim is to create a leveled sports field which is friendly to play.

OUR ACHIEVEMENTS

Living with the Community

Stephen has moved to one of the homes of his students. He is living in the family and helping them out in their daily chores and also spend time with children on school work.

I stayed in the community for 3 weeks and the understanding that I through that has been immense and I would definitely explore more and try to see how I can understand them better and work together with them to tackle and solve the common issues. With as many discussions I have had with the community the parents don't see a value in sending kids to school because the situation has been the same since a long time and they just don't know how their kid would benefit from going to school but after talking to them and making them understand that we are in this together and as much as I am trying to help the situation I will still need your support to solve this. They have shown great interest in fixing this issue but one should know how to fix the situation, I am confident Kshamtalaya along with the community will surely solve this issue and make a great learning space for everyone.

Crowd-funded 50 footballs

Stephen was able to get 50 footballs from an organization called "Ball to All" and he has also managed to get funds to buy sports shoes for the children.

He is training the children himself on football and soon he aims to Coach local youth to become facilitators/assistant coaches to initiate football/Ultimate Frisbee in schools and amongst communities.

DESKITS FOR 300 CHILDREN

Deepshikha Started with a crowdfunding campaign to provide portable study infrastructure (DESKIT) to 300 children. I was able to raise 1.5 Lakhs in 3 months. Now all the children are having a school bag (water-proof) with a desk facility attached to it. This can be used both at school and home as well.

BHoola GIRLS ARE KHO-KHO CHAMPIONS!

Girls of Bhoola School went out of their village for the first and participated in the Sports Tournament organized specially for the Scheduled Tribes category in Rajasthan.

Deepshikha had introduced Kho-Kho for the very first time to these girls during weekend session.

“Never did I imagine that these girls will win at the Block and District level in Kho-Kho”

After that these girls represented themselves at the State level where out of 8 teams, they stood 4th and 2 girls have been selected for Nationals. Those who went till States, are going to get monthly pension of Rs 500 in their accounts.

OTHER PROJECTS:

- Successfully installed a cooking gas stove in the kitchen of the school to prepare the mid day meal. Along with that I have worked on the menu of the mid day meal plus given cooking demonstration to the cooks.
- Regular distribution of Iron and Folic acid and Albendazole tablets in school started.
- WASH: Successful completion of water tank and tippy-tap handwasher in 5 Hamlets (10 House Holds each). Prior to this a survey was done, and on the basis of the information was received, workshop was tailored and designed.
- Workshop with 50 Girls on Menstrual Health and Education *Campaign Name: “Kapda Kranti – Chuppi todo aur sashatk bano”*
- Organized a Graffiti workshop for the student in the schools of Zhed and Bhoola by Ms Kajal Singh, India’s first female graffiti artist

About the Campaign: Prior to the workshop a survey was done in the village to have an idea of

the knowledge girls and women had about menstruation in general. In the workshop, the girls were taught about their body (female reproductive system), why period happens and how it happens. The girls were taught about how to prepare themselves before every period by being able to track

their cycle. The workshop was fun with lot of games, fillers and educational videos (menstrupedia) in it. Lastly, girls were shown various products used during periods and were given a detailed information about each one. Then the girls were distributed with ecofriendly reusable cloth pads which were sent by Ecofemme for the pilot study in the village. These pads can be used for upto 2-3 years. At last all the girls took an oath to speak about menstruation openly and freely from now and to pass on the knowledge and values gained with at least one girl.

Few girls in the small group were even taught to stitch a cloth pad on their own.

“The goal of education is not to increase the amount of knowledge but to create the possibilities for a child to invent and discover....” Jean Piaget

PROJECT L.O.V.E.

Grades 1 to 5

MEET VIJAY AND MAYA

iDISCOVER fellows from Kotra who are now teaching in the same school that they studied in

ABOUT PROJECT

Quarterly Report: December 2017 to February 2018

Project Name: Project Learning Orbit for Village Excellence

Project Period	1 Year (Sep 2017 - Aug 2018)
Target no of beneficiaries in Year 1 of NSE - Jatan Engagement	Total School - 30 Total Children - 3200 students

Name of the Partner Organization: Jatan Sansthan

Target Beneficiaries: 30 primary government schools in Gogunda and Kotra blocks of Udaipur districts

Scope of the work:

- To enable and support students complete school education and envision a happy and productive life.
- To support comprehensive School Improvement Plan including the areas of empowerment of instructional leadership, teachers' professional development, teaching and learning resources and improvement of systems and processes of school governance.

Objectives of the Project:

- To create change readiness among various stakeholders in school
- Create content for teachers around integration of mindfulness and social emotional learning in school subjects.
- Build aspirations in students to complete school education.
- Enable students with mindfulness and systems thinking abilities and provide mentorship to induce 'life preparedness' in students' post school.
- Cultivate leadership qualities and civic engagement in the students to promote grass-root dynamism.
- Increase the attendance percentage
- Increase the learning outcomes
- Ownership of personal and professional development of teachers
- Creating and implementing a collaborative school development plan

HIGHLIGHTS OF THE QUARTER

Learning Festivals	Current Quarter	Previous Quarter
Total number of learning festivals organized	0	2
No. of participants in the festival	-	More than 400 students
Participation of schools in the festival	-	5 schools
Theme of the learning festival	-	“Experiencing various mediums like art, dance, photography,

BASELINE ANALYSIS

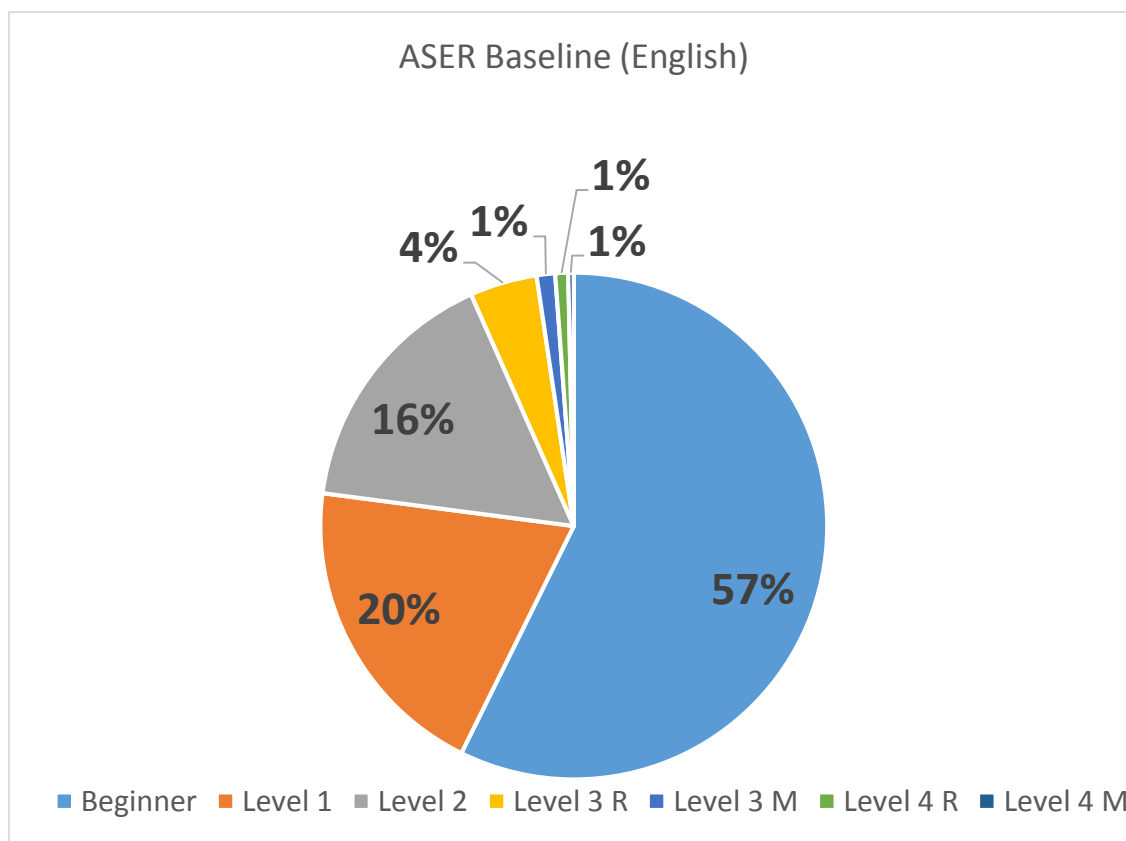

Nationally, the proportion of children in Std III who are able to read at least Std I level text has gone up slightly, from 40.2% in 2014 to 42.5% in 2016. This proportion shows substantial increases among children in government schools in many states: Punjab, Uttarakhand, Haryana, Chhattisgarh, Gujarat, Maharashtra and Telangana. All these states show an improvement of more than 7 percentage points since 2014. Overall reading levels in Std V are almost the same year on year from 2011 to 2016. However, the proportion of children in Std V who could read a Std II level text improved by more than 5 percentage points from 2014 to 2016 in Gujarat, Maharashtra, Tripura, Nagaland and Rajasthan. This improvement is driven by gains in learning levels in government schools in these states. **(Source: ASER Report of 2016)**

In our intervention, we used the ASER test to conduct a baseline for understanding the current status of learning levels in Math and English with the students we are working with. To get an understanding of the current status of learning level in children we used ASER tool and below given is the graph about our findings. The total number of children enrolled in the **23 schools from Grades 1 to 5** that we are working in now are 1836 according to the records on the register maintained by the school and out of these **1701 were assessed for the baseline in English** and **1694 students for the math assessment**.

For both English and math we have shared excerpts of the report by ASER in 2016 to compare the national average to our average.

Learning indicators for language development (English)

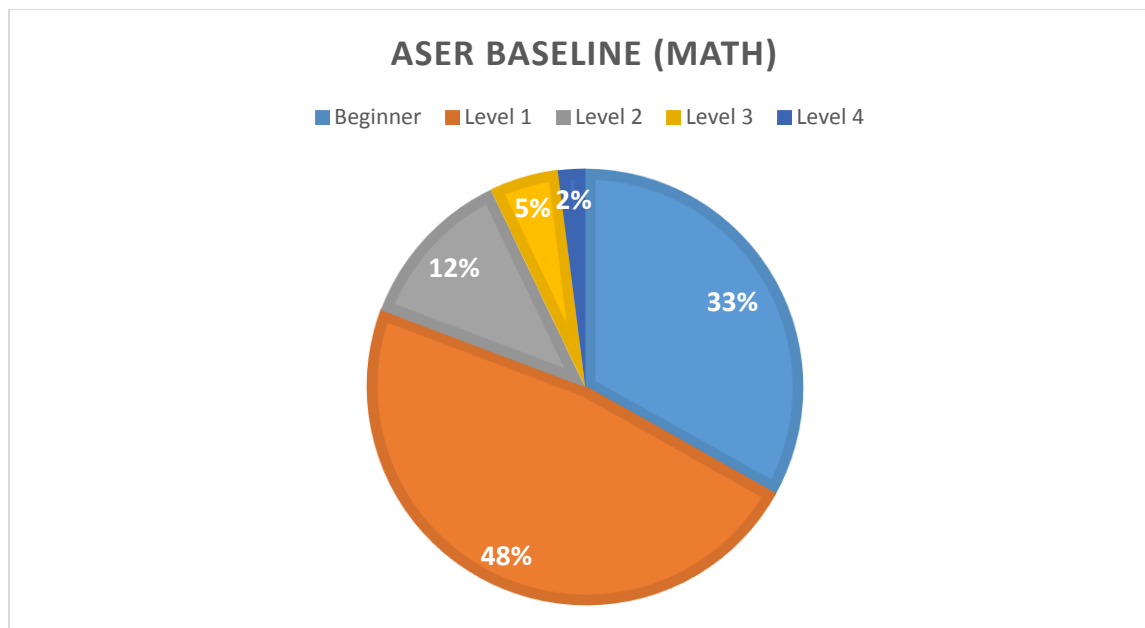

Ability to read English is unchanged for lower primary grades. Assessments of basic English have been carried out in 2007, 2009, 2012, 2014 and 2016. Children's ability to read English is slightly improved in Std III but relatively unchanged in Std V. In 2016, 32% children in Std III could read simple words in English as compared to 28.5% in 2009. In comparison, in 2016, 24.5% of children enrolled in Std V could read simple English sentences. This number is virtually unchanged since 2009. However, a few states show improvements since 2014 for government school children enrolled in Std V. These states are Himachal Pradesh, Uttarakhand, Haryana, Maharashtra and Kerala (all with improvements of 5 percentage points or more). In nine states, the levels of English reading of private schools has also improved. These are Himachal Pradesh, Punjab, Assam, Jharkhand, Chhattisgarh, Madhya Pradesh, Tamil Nadu, Andhra Pradesh and Telangana. **(Source ASER Report 2016)**

Learning Abilities (Baseline)	No. of Students
Beginner (Is not in the first level)	947
Level 1 (Is able to read capital letters)	327
Level 2 (Is able to read small letters)	276
Level 3 R (Is able to read words)	67
Level 3 M (Is able to tell the meaning of the words read)	19
Level 4 R (Is able to read sentences)	14
Level 4 M (is able to tell the meaning of the sentences read)	6

In the baseline conducted by our fellows, with the total number of 1694 students assessed for the English baseline 57% are in the beginner level, which means that more than half of the students that we are working with are not able to identify capital letters and small letters. About 20% of the children are able to read the capital letters and 17% can identify the small letters. The more shocking numbers are of how only 67 children are able to read the words and out of those only 19 are able to tell the meaning. Further, 14 children out of 1643 students can read simple sentences in english but a handful of them, 6 students can tell its meaning.

Learning indicators for math development

Although low, the all India (rural) figures for basic arithmetic have improved slightly for Std III in 2016 as compared to 2014. This is the first year since 2010, that there is an upward trend in arithmetic figures.

In 2014, for the country 25.4% of Std III children could do a 2-digit subtraction. This number has risen slightly to 27.7% in 2016. This improvement has come primarily from government schools where the percentage of Std III children who could do a 2-digit subtraction increased from 17.2% in 2014 to 20.2% in 2016. From 2014 to 2016, for Std V children, the level of arithmetic as measured by children's ability to do simple division problems has remained almost the same at 26%. Only five major states show an improvement of more than 5 percentage points. These are Himachal Pradesh, Madhya Pradesh, Odisha, Chhattisgarh and Uttarakhand. However, the ability to do division among Std VIII students has continued to drop. This declining trend has been observed since 2010. The proportion of Std VIII students who could correctly do a 3-digit by 1-digit division problem was 68.4% in 2010. This number dropped to 44.2% in 2014, and has further declined to 43.3% in 2016. Only children in Manipur, Karnataka and Telangana show an increase of 5 percentage points or more.

Math Abilities (Baseline)	No. of Students
Beginner	561
Level 1 (Identifying single digit number)	807
Level 2 (Identifying double digit numbers)	206
Level 3 (ability to subtract)	87
Level 4 (ability to divide)	33

In the 23 schools that we assessed, for math the turnout was 1694 students. As you can see from the graphs above and the table, we have 561 students in the beginner level. Which means 33%, of our sample are at the beginner level. It is alarming because that signifies that many children cannot even identify written numbers. Further we have a large chunk of the population sample at 48% who can identify single digit numbers only and 206 students i.e. 12% of them can identify double digits.

Level 3 of Math ASER analysis looks at whether children are able to solve simple subtraction problems. In our sample, 87 students, close to 5% of the sample could do it and trickling down to 2% of children who are able to solve division sums.

QUALITATIVE INDICATORS FOR DIRECT BENEFICIARIES:

1. Change readiness among students, teachers and parents in school

Participation of teachers in activities organized by fellows: Having placed fellows in 23 schools and during the school visits we have found how teachers feeling highly supported by fellows. We are also seeing behavioural change in teachers where they have started participating in the morning games played by fellows with children and this youtube link shows a snippet of the Learning Festival last year December where teachers took part in games. We heard the children say that they couldn't believe their teachers participated in their game in the Bikarni school. See the video here: <https://www.youtube.com/watch?v=xEbESTC2HVV>

Survey and Research: The fellows are engaging with the community on a weekly basis doing the household survey and they also conducted a research by interviewing various stakeholders to know what they think about school. Some of our findings:

- (a) Top 3 reasons why parents are sending their children to school – To get a job, To be able to learn how to count and to study
- (b) Parents do not visit school unless it is August 15th or January 26th celebrations
- (c) When asked what should be there in school they said there should be sports and games because children cannot study all day
- (d) The parents and other stakeholders also agreed to support in events like the Learning Festival. They also said how the community spaces can also be used for it.

2. Enable students with mindfulness and systems thinking abilities and provide mentorship to induce 'life preparedness' in students' post school.

Fellows have started to integrate mindfulness in their lesson plans. Here is a sample lesson plan that takes children on a journey to experience the curriculum in a mindful way:

Day 3:

Colours of leaves, flowers and fruits

The Process of introducing the concept:

Recall the previous day's session.

Then organise the class into a mindfulness session. The script is as follows:

You all have been seeing plants. Fruits. Flowers. Now when you are walking along so many plants, fruits and flowers, notice their colours. Some are green. Some are other colours. The ones in green. What are they? Are they leaves? Are they fruits? Are they flowers? The ones in other colours. What are they? Are they fruits? Are they flowers? Are they leaves? From the other colours that you see. What are those colours? Think of all the colours you see.

Now slowly come back to class.

Initiate a discussion with the class as to what colours they saw. What colours were the leaves? What colours were the fruits? What colours were the flowers?

Activity:

Hand over worksheets to the class and the worksheets will have the following format.

Pictures of fruits, flowers and leaves are drawn. Class has to colour it choosing colours from the table given. The colours will also have their names below each of it.

Post this, the children will be shown flashcards of colours and taught of their names. The next worksheet will have a match the following table with the names of colours and the colours themselves. The children have to match them

The next worksheet will ask the children to draw the flowers, fruits and leaves of their choice and colour them in their right colours.

3. Cultivate leadership qualities and civic engagement in the students.

Student Learning Facilitators Arvind and Vinay who are studying in Class 7 and Class 11 respectively have shown profound eagerness and openness to learn. They are present during the de-brief sessions, spend their after school hours with fellows Pawan, Rahul and Manoj and played a vital role in running the entire Learning festival in Bikarni in the previous quarter. In the upcoming quarter we are creating a space where 1 or 2 students of every fellow can participate in the training sessions of fellows and de-briefs so that we get their perspectives on our preparation and learn from them as to how they think.

“Why do you spend time with Pawan, Rahul and Manoj Bhaiyya?”

Vinay: “They help me study and I learn a lot of things to do in school when I am with them”

“What do you want to do when you grow up?”

Arvind: “I want to work with all of you”

QUANTITATIVE INDICATORS FOR DIRECT BENEFICIARIES:

Final Expected Outcome	Indicator	Actuals
No. of Fellows		23
Subject classes taken by Fellows (Language, Social Science and Social & Emotional Learning)	School records, feedback of children and school management.	No. of days visited to school by fellow on an average is 57 days from December to March
No. of training sessions conducted for capacity building of fellows and its frequency	Records of the sessions, attendance of trainings, photos, reports	Frequency is based on need. Weekly de-briefs are conducted in the block. Capacity building from first quarter till present is 8 sessions.
No. of school teacher coaching and workshop sessions	Records and photos of the sessions, attendance record	-
Self-Assessment of teachers	Records of the assessment, analysis of the assessment	-

Creating and implementing a collaborative school development plan	Regular school management committee meetings and minutes and regular school management committee meetings and minutes	-
Create content for teachers around integration of mindfulness and social emotional learning in school subjects.	The volume of the pedagogy should be delineated according to subject keeping in mind NCF, course book, tentative designs, illustrations and facilitator's guide. This would be done in association with various knowledge partners.	-
Sessions with Community members for sensitization and building sustainability in program	Session minutes, photos, documentation of suggestions and action plan.	-
Engaging government stakeholders for sustained intervention	Records of meetings, photos, reports/ minutes of meetings	-
